# Experiment 6

Center of Pressure

ID: 1834046

Name:

ياسر عيسى د. راجد

SEC.1

## 1. Data and Calculations: Notes: - All unit in hydraulic lab convert it to large unit for example (g to kg) and so on.

| $\gamma$ (N/m <sup>3</sup> ) = $\rho \cdot g$ | b (mm) | d (mm) | R1 (mm) | R2 (mm) | R3 (mm) |
|-----------------------------------------------|--------|--------|---------|---------|---------|
| 9810                                          | 75     | 100    | 100     | 200     | 200     |

### 1.1 Totally Immersed

**Table 1:** Determination of the calculated and experimental center of pressure on a plan surface totally immersed with water.

| Mass (g) | Water depth y (mm) | $\bar{y}$ (mm) | $F_{theo.}$ (N) | $F_{exp.}$ (N) | $Y_{c.p.}$ calculated (mm) | $Y_{c.p.}$ experimental (mm) |
|----------|--------------------|----------------|-----------------|----------------|----------------------------|------------------------------|
| 400      | 122                | 72             | 5.3             | 5.67           | 84                         | 70                           |
| 500      | 155                | 105            | 7.73            | 6.91           | 112.9                      | 81.9                         |

Show sample of calculation on each computation of mass 400g

| $\bar{y}$ (mm)                                                              | $F_{theo.}$ (N)                                                                                        | $F_{exp.}$ (N)                                                                                                                                                                    | $Y_{c.p.}$ calculated (mm)                                                                                                                                                         | $Y_{c.p.}$ experimental (mm)                                                                                                                                                               |
|-----------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $\bar{y} = y - \frac{d}{2}$<br>$= 122 - \frac{100}{2}$<br>$= 72 \text{ mm}$ | $F_{theo.} = \rho g \bar{y} b d$<br>$= 9810 \times 0.072 \times 0.075 \times 0.1$<br>$= 5.3 \text{ N}$ | $F_{exp.} = m g R_3$<br>$R_2 = \left( \frac{y d}{2} - \frac{d^2}{6} \right)$<br>$y = \frac{d}{2}$<br>$= 0.4 \times 9.81 \times 0.2$<br>$= 0.7848 \text{ N}$<br>$= 0.78 \text{ N}$ | $Y_{c.p.} = \bar{y} + \frac{I}{\bar{y} A}$<br>$= 0.072 + \frac{1}{12} \times \frac{0.075 \times 0.1^3}{0.072 \times 0.075 \times 0.1}$<br>$= 0.084 \text{ m}$<br>$= 84 \text{ mm}$ | $Y_{c.p.} = \frac{2 m R_3}{\rho (2 y b d - b d^2)} + \bar{y}$<br>$= \frac{2 (0.4) \times 0.2}{1000 (2 (0.122) \times 0.075 - 0.075^2)} + 0.072$<br>$= 0.07 \text{ m}$<br>$= 70 \text{ mm}$ |

### 1.3 Partially Immersed

**Table 2:** Determination of the calculated and experimental center of pressure on a plan surface partially immersed with water

| Mass (g) | Water depth y (mm) | $\bar{y}$ (mm) | $F_{theo.}$ (N) | $F_{exp.}$ (N) | $Y_{c.p.}$ theo. (mm) | $Y_{c.p.}$ experimental (mm) |
|----------|--------------------|----------------|-----------------|----------------|-----------------------|------------------------------|
| 100      | 54                 | 27             | 1.073           | 1.078          | 36 mm                 | 36.9                         |
| 200      | 78                 | 39             | 2.24            | 2.255          | 52 mm                 | 53.3                         |

Show sample of calculation on each computation of mass 100g

| $\bar{y}$ (mm)                                              | $F_{theo.}$ (N)                                                                                          | $F_{exp.}$ (N)                                                                                                               | $Y_{c.p.}$ calculated (mm)                                                                                                                                                             | $Y_{c.p.}$ experimental (mm)                                                                                                                                                |
|-------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Name: غازم عمر خليفة درويش

ID: 1834046

## 2. Plot the results:

Draw  $Y_{c,p}$  Theo. VS.  $Y_{c,p}$  experimental for Totally and Partially immersed in the same figure.

\*Hint: the plot must start from origin

$y_{cp}$   
theo

Find the angles and determine if its accepted or not according to the angles values. ( $40^\circ$ - $50^\circ$ ).

$y_{cp}$   
Exp.

Totally:

$$\text{angle} = \tan^{-1}(\text{slope}) = \tan^{-1}\left(\frac{90-50}{70-40}\right) = \tan^{-1}\left(\frac{40}{30}\right) = 53.13^\circ$$

not accepted

Partially:

$$\tan^{-1}(\text{slope}) = \tan^{-1}\left(\frac{40-20}{40-20}\right) = 45^\circ$$

accepted

حارث محمد خلیفہ داروہ  
۱۸۳۶۰۶۶

1) it is a linear relation

2) pressure  $\propto$  water increase by depth

## Experiment 6 Orifice and Jet Flow

ID: 1834046

Name:

كريم عيسى درويش

SEC.1

### 1. Data and Calculations: Hint: Diameter of orifice is 6mm

| Trial # | H (cm) | V (Lt) | Time (sec) | H (m) | Q <sub>act</sub> (m <sup>3</sup> /s) | H <sup>0.5</sup> |
|---------|--------|--------|------------|-------|--------------------------------------|------------------|
| 1       | 30     | 5      | 135        | 0.3   | $3.7 \times 10^{-5}$                 | 0.55             |
| 2       | 40     | 5      | 111        | 0.4   | $4.5 \times 10^{-5}$                 | 0.63             |

1.2. According to the second trial find:

A. Theoretical flow rate (m<sup>3</sup>/s)

$$Q_{theo} = \frac{\pi}{4} D^2 \sqrt{2gH}$$

$$= \frac{\pi}{4} (0.006)^2 \sqrt{2 \times 9.81 \times 0.4}$$

$$= 7.92 \times 10^{-5} \text{ m}^3/\text{s}$$

$$Q_{act} = \frac{V}{t}$$

$$= \frac{0.005}{111} = 4.5 \times 10^{-5} \text{ m}^3/\text{s}$$

B. Coefficient of discharge (Cd).

$$C_d = \frac{Q_{act}}{Q_{theo}} = \frac{4.5 \times 10^{-5}}{7.92 \times 10^{-5}} = 0.568$$

C. coefficient of velocity (Cv) if the flow jet is traveling horizontal distance (X) 350mm while falling vertical distance (Y) 83mm. Is it valid or not? Why?

$$C_v = \frac{X}{2\sqrt{yH}} = \frac{0.35}{2\sqrt{0.083 \times 0.4}} = 0.96 < 1$$

it's valid because it's less than 1

D. Coefficient of contract area (Cc). (Cd=Cc\*CV). Is it valid or not? Why?

$$C_c = \frac{C_d}{C_v} = \frac{0.568}{0.96} = 0.592 < 1$$

it's valid because it's less than 1

1834046

مازيم عمر دراويز

**2. Plots:**

- Plot  $Q_a$  versus  $(H^{0.5})$  and from the plot compute  $C_d$ . (The plot must pass through origin).
- Is  $C_d$  value valid or not, why?

**Hint:** Slope =  $\Delta Q_a / \Delta H^{0.5} = A \cdot C_d \cdot (2g)^{0.5}$

$$\text{slope} = \frac{(3-2) \times 10^{-5}}{(0.45-0.3)} = 6.67 \times 10^{-5} = \frac{\Delta Q_a}{\Delta \sqrt{H}}$$

$$C_d = \frac{\text{slope}}{A \sqrt{2g}} = \frac{6.67 \times 10^{-5}}{\frac{\pi}{4} (0.006^2) \times \sqrt{2 \times 9.81}}$$

$$C_d = 0.533 < 1 \quad \text{it is valid because it's less than 1}$$

ID: 1834046

Name:

ماز م عمر درار

**4. Plots:**

- Plot  $Q_{act}$  ( $m^3/s$ ) versus  $(h_1 - h_2)^{0.5}$ . Use the slope of this plot to calculate the discharge coefficient  $C_d$ .

**Hint:** The line must be passing through origin

$$\text{slope} = \frac{(0.9 - 0.45) \times 10^4}{0.3 - 0.15} = 3 \times 10^4$$

 $\sqrt{h_1 - h_2}$ 

$$CD: \text{slope} = C_d \times A_2 \sqrt{\frac{2g}{1 - \left(\frac{A_2}{A_1}\right)^2}} \Rightarrow C_d = \frac{\text{slope}}{A_2 \sqrt{\frac{2g}{1 - \left(\frac{A_2}{A_1}\right)^2}}}$$

$$C_d = \frac{3 \times 10^4}{7.85 \times 10^{-5} \sqrt{\frac{2 \times 9.81}{1 - \left(\frac{7.85 \times 10^{-5}}{4.91 \times 10^{-4}}\right)^2}}} = 0.8517$$

Comment on  $C_d$  value:it's accepted because it's less than 1 ( $0.8517 < 1$ )

1834016

مازم محمد دراويش

- Plot  $C_d$  versus  $Re$

سيتم اذراج اسئلة المناقشة لاحقا

The relation between  $Re$  &  $C_d$  is not direct  
 when  $Re$  inc.  $\uparrow$ ,  $C_d$  dec.  $\downarrow$   
 & when  $Re$  dec.  $\downarrow$ ,  $C_d$  inc.  $\uparrow$

### 4.3. Plot

Plot  $F_{\text{measured}}$  versus  $mv_0$  for each of the tested targets on the same chart and determine the slope.  
**Hint:** start from origin.

$F_m (N)$

1834046

مازم عمر درآوده

Slope ( $\theta = 90^\circ$ )

$$\text{slope} = \frac{\Delta y}{\Delta x} = \frac{1.1 - 0.2}{1.2 - 0.2} = 0.9$$

Slope ( $\theta = 120^\circ$ )

$$\text{slope} = \frac{\Delta y}{\Delta x} = \frac{0.9 - 0.6}{0.6 - 0.4} = 1.5$$

Discussion

①

slope as calculated

$$\theta = 90^\circ: \frac{\Delta y}{\Delta x} = \frac{1.96 - 0.98}{2.14 - 1.04} = 0.85 < 1 \text{ plate}$$

$$(1 - \cos 90^\circ) = 1 \checkmark$$

$$\theta = 120^\circ: \frac{\Delta y}{\Delta x} = \frac{1.96 - 0.98}{1.36 - 0.62} = 1.32 > 1$$

$$\approx 1.5 \text{ cone } (1 - \cos 120^\circ) = 1.5 \checkmark$$

Slope as measured (from graph)

$$\theta = 90^\circ \Rightarrow \text{slope} = 0.9$$

$$\theta = 120^\circ \Rightarrow \text{slope} = 1.5$$

$$\begin{aligned} \textcircled{2} \quad F &= mV_0(1 - \cos \theta) \\ &= mV_0(1 - \cos 280^\circ) \\ &= mV_0(0.826) \end{aligned}$$

### 3. Plots:

h<sub>L</sub> (m) 3.1. Plot h<sub>L</sub> versus V of different pipes on the same graph.

سيتم ادراج اسئلة المناقشة لاحقا

#### 4. Discussion

1)

1. True

2. False

3. False

4. False

2) The flow is turbulent because the relationship between  $h_L$  &  $v$  is not linear ( $h_L \propto v^2$ )

### 8.3. Plot

- Plot  $Q_{act}$  versus  $h_o^{0.5}$  for each  $h_g$ .

Hint: Best-fit line must be pass through (0, 0).

- From the plot determine  $C_d$  at each  $h_g$ .

حازم محمد درويش  
1834046

|            |                  | avg. Volume          |       | 0.9                 |                                                |

$$ph.ph \text{ Alk} = \frac{0.9 \times 0.02 \times 50 \times 10^3}{100} = 9 \text{ mg/L as } CaCO_3$$

| Sample No. | V of sample (ml) | Burette reading (ml) |       | V of $H_2SO_4$ (ml) | Total alkalinity (mg/L as $CaCO_3$ ) |
|------------|------------------|----------------------|-------|---------------------|--------------------------------------|
|            |                  | initial              | Final |                     |                                      |
| 1          | 100              | 6.8                  | 52.8  | 46                  | 467                                  |
| 2          | 100              | 1.4                  | 47    | 45.6                |                                      |
|            |                  | avg. Volume          |       | 45.8                |                                      |

$$T. alk = \frac{(0.9 + 45.8) \times 0.02 \times 50 \times 10^3}{100} = 467 \text{ mg/L as } CaCO_3$$

1)  $P < \frac{1}{2} T \rightarrow$  it contains  $CO_3^{2-}$  &  $HCO_3^-$   
carbonate & bicarbonate  
( $OH^- = 0$ )

$$CO_3^{2-} = 2P = 2(9) = 18 \text{ mg/L as } CaCO_3$$

$$HCO_3^- = T - 2P = 467 - 18 = 449 \text{ mg/L as } CaCO_3$$

2) Since  $P = 0$

$$\text{So } T. alk = \frac{20 \times 0.02 \times 50 \times 10^3}{100} = 2000 \text{ mg/L as } CaCO_3$$

$$T = HCO_3^- \quad (\text{Total alkalinity})$$

## Experiment 10

### Pumps in Parallel and Series

ID: 1839046

Name:

طارم عمر خليفة د. اوته

SEC.1.

### 1. Data and Calculations:

#### 1. Parallel Connection

2 T & F:

10  
183446

1) F

2) T

3) we need to buy another pump and connect it with the first one in parallel

**2. Plot**

- 1- Plot  $H$  VS  $Q$  for single pump, series and parallel pumps.
- 2- Plot  $\epsilon$  vs.  $Q$  on the same plot for single pump. (start from origin)
